Hey Richard, I'm having trouble understanding the technical language in the Zenith plan, could you help me understand this part?

"The plant has a 15,000 bbl per day crude oil vacuum distillation unit, a batch air still refining process, an emulsion manufacturing process, an asphalt blending process, a boiler plant, and a hot oil heating system."

I understood about half of that, but was wondering if you could explain it to me. Have some time to chat today after 2?

-Scott

Unfortunately, I will be out at training on Sep 7th. And Sep 20th is too late, we are trying to get it completed and in our MISLE database before the end of FY18 so that we can receive the credit for completing the required 4 GIUEs through the FY. So the 20th doesn't leave a lot of time for me to do that.

I'll try to have it done during that first week of September, best case scenario, but might have to push it back to the second week if things don't go smoothly.

Sorry about that! I'll keep you both updated on date and time as it gets closer and the schedule gets more set. Thanks!

Very Respectfully,

Of Richard's preferred days I could do Sept 7th or 20th.

Hi Alisha. I think that running a GIUE at Tidewater Vancouver is good, but my September is almost completely booked. The only days I am available are Friday Sept. 7, or Thursday/Friday 20th or 21st. However, do not change the date for me - make it work for you and your team and the state.

Thanks,

Richard

Mr. Franklin & Scott,

I'm working on planning the last GIUE of the FY. We're thinking of Tidewater Vancouver in early September. Thoughts?

Scott - I still have your list of your available dates for the exercise, is that still accurate? I have 28-30Aug or 5-7Sep. And could you possibly be available the second week of September?
